

Harvester supports adding hot-plug volumes to a running VM.

:::info

Currently, KubeVirt only supports disk bus `scsi` for hot-plug volumes. For more information, see this [issue](#).

:::

Adding Hot-Plug Volumes to a Running VM

The following steps assume that you have a running VM and a ready volume:

1. Go to the **Virtual Machines** page.
2. Find the VM that you want to add a volume to and select : > **Add Volume**.

Add Volume Button

1. Enter the **Name** and select the **Volume**.
2. Click **Apply**.

Add Volume Panel
