

## Important changes to this version

Harvester v1.2.1 fixes upgrade known issues found in v1.2.0 , we suggest upgrading v1.1.2 , v1.1.3 , or v1.2.0 clusters to v1.2.1 . The known issues found in v1.2.0 are:

- [An Upgrade is stuck in the Post-draining state](#)
- [An upgrade is stuck in the Upgrading System Service state due to the customer provided SSL certificate without IP SAN error in fleet-agent](#)

For clusters already upgraded to v1.2.0, please refer to the [release note](#) for new changes.

## General information

:::tip

Before you start an upgrade, you can run the pre-check script to make sure the cluster is in a stable state. For more details, please visit this [URL](#) for the script. :::

Once there is an upgradable version, the Harvester GUI Dashboard page will show an upgrade button. For more details, please refer to [start an upgrade](#).

For the air-gap env upgrade, please refer to [prepare an air-gapped upgrade](#).

## Known issues

Please check v1.2.0 [known issues](#).
